

Using the Elbow method to compute the number of clusters and we obtain the following plot of SSE (sum of squared errors) vs the number of clusters:

From the above diagram, we can consider the **number of clusters as 4**.

The Davies-Bouldin Index obtained with 4 clusters is: 1.193774683695561

The Silhouette Score obtained with 4 clusters is: 0.3169758859445276
